# 1. ABSTRACT

**Topic:** Effectiveness of Special Seating to better Hand Function for Children With Spastic Quadriplegic Type Of Cerebral Palsy.

**Objective:** To compare special seating with box sitting for effective use of hand function.

**Method:** The research was done in quantitative method.

**Study design:** Convenience sampling, using experimental same subject design.

**Setting:** The study is conducted at Special Seating Unit in Centre for the Rehabilitation of the Paralyzed (CRP), Savar, Dhaka.

**Subjects:** Ten participants who meet the selection criteria for this research.

**Result:** Special Seating is more effective for hand function than box sitting who are not able to sit without external support.

**Keywords:** Cerebral Palsy, Special Seating, Hand Function.
